CanWISP 2020 Conference - Wrap Up

Posted by: Anonymous member (Administrator)

March 09, 2020 9:42 PM

Another edition of the CanWISP conference with record attendance is in-the-books. With over 300 attendees and more poutine than we could eat it was our best yet.

The presentations from the conference are below including the backup presentation from Preseem that we had ready to go if needed.

CRTC wholesale decision impacting investment in rural broadband networks

- \$100-million cost impact causes Bell to scale back Wireless Home Internet rollout in smaller towns and rural communities by approximately 20%
- CRTC order comes just a week after Competition Bureau warned of the negative impacts of unrealistic wholesale rates

MONTRÉAL, Aug. 19, 2019 /CNW Telbec/ - Following the CRTC's August 15 decision to significantly lower the wholesale rates that third-party Internet resellers pay to access network infrastructure built by providers like Bell, the company today announced the estimated \$100-million impact of the CRTC's order will reduce the scope of Bell's broadband Internet buildout for smaller towns and rural communities by 20%, or approximately 200,000 households.

"The CRTC's decision transfers capital from providers like Bell who are building Canada's modern broadband networks to wholesale resellers that invest little to nothing – and there's no assurance or requirement from the CRTC that any of it will be dedicated to network buildouts or otherwise passed on to Canadian consumers," said Mirko Bibic, Bell's Chief Operating Officer. "Putting this kind of unexpected and retroactive tax on capital investment is not the way to ensure the continued development of Canada's Internet infrastructure."

CRTC scraps plan to mandate lower wholesale internet rates

Decision a win for big incumbents with fibre optic networks

Competition

Minister of Innovation, Science and Industry reaffirms that competitiveness is central to a vibrant telecommunications sector

From: Innovation, Science and Economic Development Canada

Statement

March 3, 2022 – Ottawa, Ontario

Today, the Honourable François-Philippe Champagne, Minister of Innovation, Science and Industry, issued the following statement on affordability and competition in Canada's telecommunications sector:

"Access to affordable and reliable Internet and wireless services is critical in today's society and economy. That's why our government is making every effort to ensure that telecommunications services are reliable, innovative, competitive and—most crucially—affordable.

"Affordability and competition have been central to all our work in the telecommunications sector. We have encouraged greater competition, which has led to small regional players growing and challenging larger ones. Roaming on the big three networks has been regulated. We have <u>fulfilled our commitment</u> to track and reduce cellphone prices across a number of mid-range data plans and to reduce the costs by 25% within two years. We have also invested an historic \$7.2

Ottawa to block the 'wholesale transfer' of wireless licences in Shaw-Rogers deal

Independent telecom TekSavvy Solutions Inc. is seeking leave to appeal a controversial ruling on wholesale broadband rates by Canada's telecom regulator that has sparked outrage among small internet-service providers.

In a May ruling, the Canadian Radio-television and Telecommunications Commission (CRTC) reversed its own 2019 decision that lowered the rates large phone and cable companies can charge smaller internet service providers (ISPs) for access to their broadband networks.

Media Giants Request Dynamic Order to Block Pirated NHL Streams in Canada

July 9, 2021 by Ernesto Van der Sar

HOME > ANTI-PIRACY > SITE BLOCKING >

Several of the largest Canadian media companies, including Bell and Rogers, are asking the Federal Court for a new and broader piracy blocking order. To prevent multi-million dollar losses, the media giants want Internet providers to dynamically block IP-addresses that provide access to pirated NHL streams.

Government of Canada Launches Consultation on How to Implement its CUSMA Commitment to Extend Canada's General Copyright Term of Protection

From: Canadian Heritage

News release

OTTAWA, February 11, 2021

In today's fast-paced creative economy, it is critical for Canada to maintain a comprehensive copyright framework to encourage creation, acquisition and commercialization of copyrighted content.

Information on the Modern Copyright Framework for Online Intermediaries consultations

Background

The dissemination and use of copyright-protected content on the Internet has expanded in recent years. Online intermediaries – the entities that facilitate access to such content – have also proliferated and diversified. In some cases, they now play more active roles in user activities involving copyright-protected content. These developments have increasingly brought into focus the liability and obligations of online intermediaries, which is an evolving area of law around the world. In Canada, questions have emerged regarding the extent to which the copyright framework for online intermediaries still achieves its underlying objectives, including protecting and encouraging the use of copyright-protected content online, safeguarding individual rights and freedoms in an open Internet and facilitating a flourishing digital market.

Consultation

The goal of this consultation is to help the Government ensure that Canada's copyright framework for online intermediaries reflects this evolving digital world. The Government welcomes all comments providing additional perspectives or evidence concerning these issues and potential options.

This consultation ran from April 14, 2021 to May 31, 2021 and is now closed. The <u>consultation paper</u> is available online and a PDF version is available as well.

Consultation on a Modern Copyright Framework for Artificial Intelligence and the Internet of Things

From: Innovation, Science and Economic Development Canada

Background

Developments in artificial intelligence (AI) are raising questions as to whether the copyright framework can adequately address new situations. Examples of new situations include the use of copyrighted works as part of text and data mining to train and develop AI applications, and the use of AI to create, produce and distribute literary, musical and other kinds of works. At the same time, the increase in the number of software-enabled products and the growth of the Internet of things (IoT) is introducing its own set of new challenges to copyright law. The IoT highlights not only the importance of technological protection measures (TPMs) for rights holders, but also the barriers to consumers' ability to repair certain software-enabled products equipped with TPMs that prevent access to software. Challenges are also appearing in certain manufacturing industries, where small and medium enterprises are encountering increasing difficulties in developing interoperable products, in part because of the presence of TPMs.

Consultation

The goal of this consultation is to help the Government ensure that Canada's copyright framework for AI and the IoT reflects this evolving digital world. The Government welcomes all comments providing additional perspectives or evidence concerning these issues and potential approaches.
