The Spectrum and Telecom Sector – *we help make wireless work!*

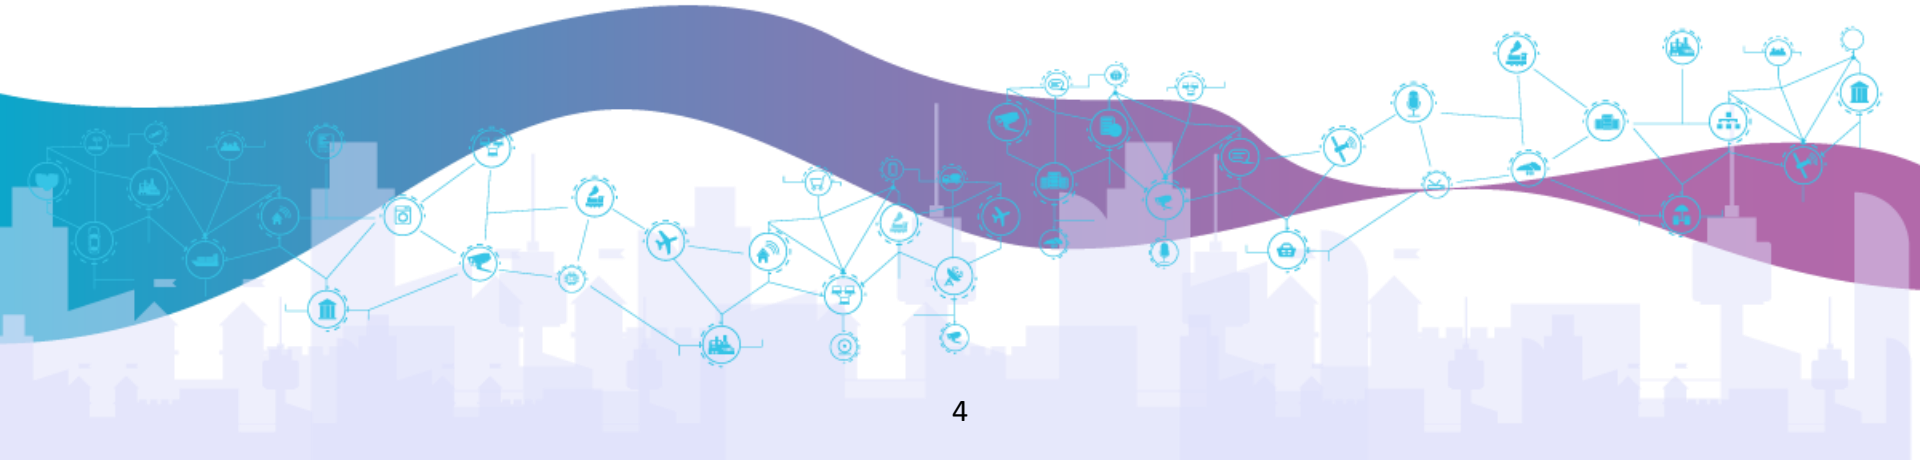

Here's what we do

Researching and regulating spectrum

Regulating telecommunications and radiocommunications equipment

Ensuring the safety and security of existing and future telecommunications infrastructure.

We work across the department, the government, at the international level, and with our stakeholders to support a competitive wireless industry, strong investment, and cyber-resilience

Policies reflect government priorities

Innovation:

"Where innovation happens is where the middle-class jobs of today and tomorrow are created. Our government is making smart and responsible investments in innovation that will result in better jobs and opportunities for all Canadians and help equip Canadians with the in-demand skills for the jobs of today and into the future. That's how innovation leads to a better Canada."

Inclusion:

"We need every Canadian to be innovation ready – ready to spot opportunities, imagine possibilities, discover new ideas, start new businesses and create new jobs. All Canadians need access to high-speed Internet, regardless of their income level or postal code. Until we bridge this digital divide, Canadians will not reach their full potential."

Rural connectivity is a priority for the Government

New Minister
of Rural
Economic
Development

Applying a rural
lens to all of
our work

There is no
single solution
to serving
rural and
remote areas
of Canada.
We hear you,
and are taking
action.

We are
examining new
tools to
address the
challenges of
serving rural
communities

Different service areas, different challenges

Giving Providers the Tools They Need

Challenges that rural providers have identified

- Tier sizes
- Licensing frameworks
- Backhaul fees

**We have lots of tools –
and we are building more**

Auction formats

Other licensing methods

Secondary Markets

ISED is Adding Tools to the Toolbox

- Developmental licence playbook
- Tier 5
- Spectrum releases
- New ways of accessing and sharing spectrum
- New rules for NGSO satellite licensing
- Backhaul fees
- What's next...

Developmental Licence Playbook

Tier 5

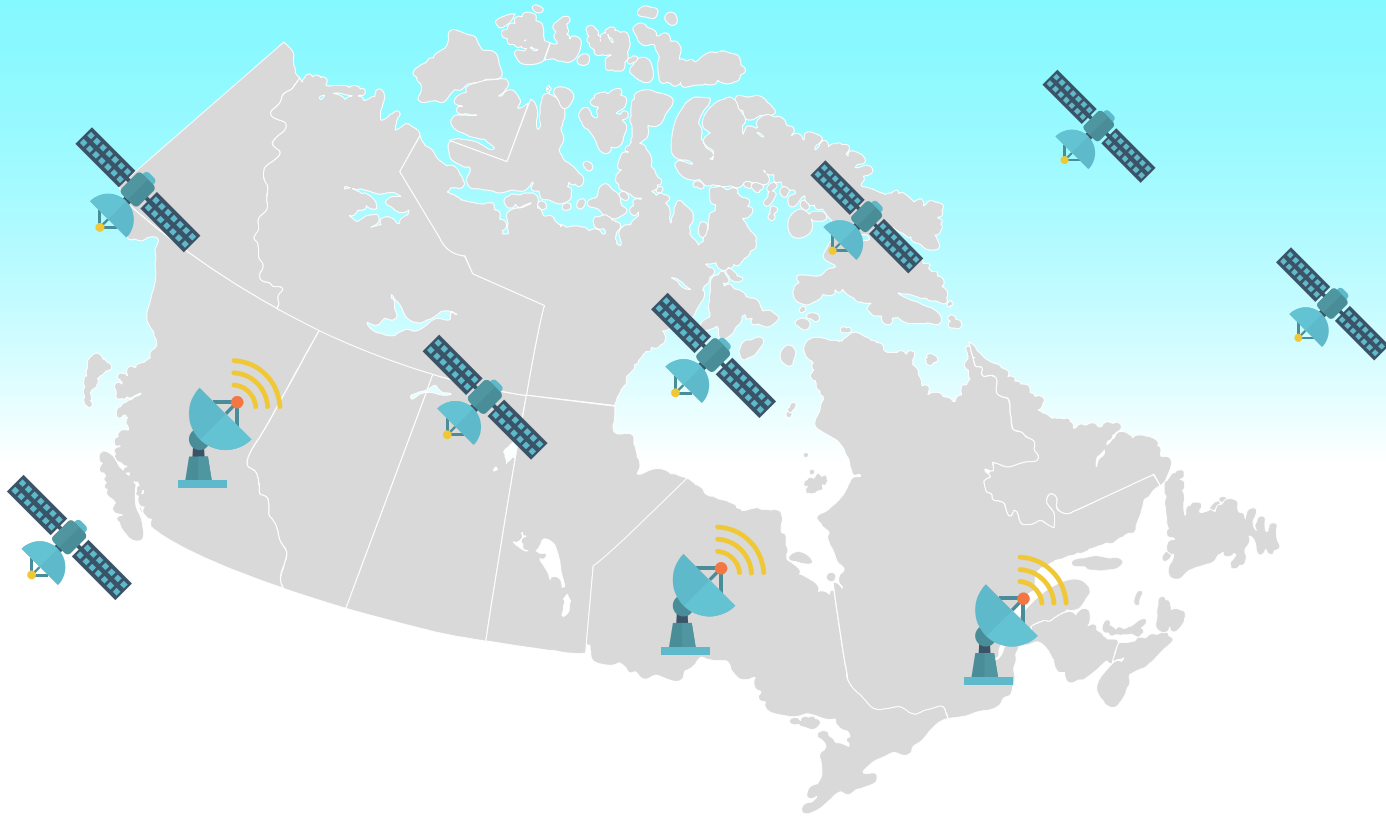

Spectrum Releases

New ways of accessing and sharing spectrum

NGSO Licensing Rules

Backhaul Fees

What's next...

- \$5B-\$6B strategy for universal high-speed internet by 2030
- \$199M to modernize spectrum management
- Studying unused spectrum in underserved areas, considering approaches to making underutilized spectrum available when there is a demand
- Making more spectrum available
